

Astronaut Scott Kelly Lauds the Nutritional and Psychological Benefits of ORBITEC's VEGGIE aboard the ISS!

Testifying from space, Kelly said it has been helpful to be able to grow things in the International Space Station, where he is stationed for a full year. *(Photo: Mary Clare Jalonick/AP)*

Citing the nutritional and psychological benefits of being able to successfully grow their own food while in LEO—the residents of the ISS are remaining upbeat during their long stay aboard the ISS.

ORBITEC created, developed, produces, and supports NASA for the VEGGIE activities. We are very proud of VEGGIE's recent success and would like to thank all who help make VEGGIE a sustaining reality.

We along with the rest of the space community are looking forward to seeing flowers aboard the ISS soon and more food products grown in space and someday on Mars!
