ORBITEC Success in Quality Confirmed.

Orbital Technologies Corporation (ORBITEC), a leading high technology development company based in Madison, Wisconsin, announced that it has completed registration to AS9100 Rev. C through Det Norske Veritas (DNV), an independent, internationally-recognized certification body that audits industry regulations. The registration is the result of ORBITEC passing rigorous audit requirements and evaluations of its quality management system to achieve a standard of quality required in the space, defense, and aviation industries. "AS9100 certification is evidence of ORBITEC's continued commitment to satisfying our aerospace customers while maintaining our eye on cost effectiveness. Becoming AS9100 certified reflects ORBITEC's ability to meet stringent aerospace industry quality management system requirements and strengthens our competitive position as a leading aerospace supplier," said Tom Crabb, ORBITEC President.

The industry-wide AS9100 standard was established in 1999 by the Society of Automotive Engineers and the European Association of Aerospace Industries. It was developed specifically for the aviation, aerospace, and defense industries. The AS9100 Rev C standard was established by the International Aerospace Quality Group (IAQG) to help achieve significant quality improvements throughout the industry and is recognized globally with many prime aerospace companies now requiring AS9100 certification from their suppliers. "AS9100 certification allows ORBITEC continued strength and expansion in the aerospace market, especially in the life support and propulsion system sectors," said Paul Zamprelli, ORBITEC Business Director. Mr. Zamprelli continued, "This certification demonstrates ORBITEC's ability to meet requirements of potential customers and positions the company for significant growth."

About Orbital Technologies Corporation (ORBITEC)

ORBITEC is a leading high technology development company based in Madison, Wisconsin. ORBITEC offers commercially mature solutions and strong capabilities in four distinct areas: next generation propulsion, propellant, and power systems; life support and environment control; bio-based products and production systems; and fire suppression. ORBITEC has won more than \$250 million in contracts to develop state-of-the-art technologies and products. The company has been able to convert research and development initiatives into leading technologies and mature those technologies into valuable products that provide significant cost advantages, superior functionality, and high reliability in their respective markets. ORBITEC is led by an experienced management team with over one hundred years of industry experience. To view ORBITEC's certification go to:
